

Dualit Pour-Over Jug

DESCRIPTION

Gooseneck Spout

Dualit's electric Pour Over Kettle is ideal for using with drip through coffee makers or for when you need a precise brewing temperature. The precision spout allows for a more even flow of water for a consistent and slow extraction of coffee, this means the maximum flavour and aroma is extracted from the coffee grounds for an exceptional filter coffee. The Pour Over Kettle also offers a better reach than traditional kettles, thanks to the long and curved gooseneck spout. The temperature control can be altered by one degree at a time from 38 Â°C to 100 Â°C. Dualit's kettle also offers a temperature hold function to maintain the selected temperature for five minutes.

Features include:

- Gooseneck spout controls the flow of water for a slow and accurate pour.
- Temperature can be changed by degree up to 100c.
- 0.8L capacity
- Digital temperature display
